Existing System Figure

Existing System Features

- Renters search flats/masses manually.
- Flat owners manually advertising for how many flats are available.
- Flat owners are manually leafleting their requirements.
- Flat owners and renters are manually met for booking flats.

Existing System Problems

- Difficulty in finding flats.
- Time consuming.
- Probability of losing information.
- Maintenance problem.

Developed System Definition

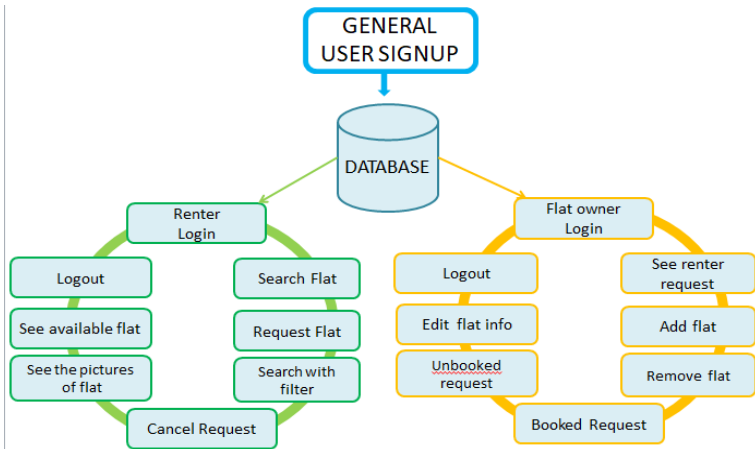

"Flat Management System is a web-based application that is designed to booking flats or masses." To solve the all existing problems,an online based *Flat Management System* is proposed that works as follows:

- Users signup online, see all available flats.
- Flat owners add flats and add their all features in system.
- Renters search and chose flats.
- Renters request for booking.
- Flat owner chooses renter in site.

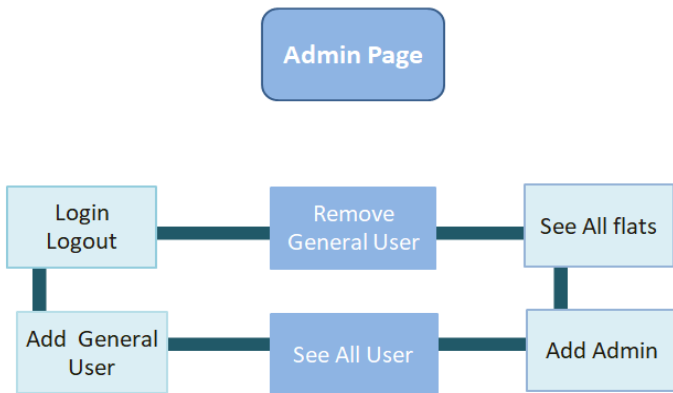

Developed System Features

- Flats management.
- Booking management.
- Renter management.
- Time saving.
- Efficiency.
- Productivity.

Developed System Workflow

Developed System Workflow

WOOW Features

- Collections of all flats.
- Search flats by any features.
- Request for any flats.
